Congratulations on selecting your new Orbit timer! With Orbit’s exclusive Easy-Set Logic™, simple programming and setup are combined with the latest timer technology and versatility.

Your new timer provides convenience and flexibility, letting you run a fully automatic, a semi-automatic, or a manual watering program for all your watering needs. Although this timer is so easy to program that you likely will not need instructions, we recommend that you read this manual fully before installation so that you understand all of the advanced features.

Section 2: Installation

Required Tools
- Phillips Screwdriver
- Wire Strippers

Installation Steps
1. Select a Location
2. Mount the Timer
3. Connect Valve Wires to Timer
4. Connect Electrical Power
5. Activate Battery
1. Select a Location

When choosing a location for your timer, consider the following:

- Choose location near a power source (if hard wiring) or electrical outlet (applicable only to U.S. retail timers)
- Ensure operating temperatures are not below 32° or above 158° Fahrenheit (below 0° Celsius or above 70° Celsius)
- Place it away from direct sunlight if possible
- Ensure at least 23 cm of space to the left of the sprinkler timer box for the door to swing open after installation
- Locate the timer where there is easy access to sprinkler wire (from valves). If mounted in an outdoor location, shut the compartment door to keep the timer safe from weather damage. To lock: insert the key and turn clockwise to the locked position

2. Mount the Timer

- Use the mounting template (included) to mark the mounting screw location on the wall. See figure 1
- Install a No. 8 screw (included) into wall in the upper template location. Leave the screw head protruding 3 mm from wall. Use expanding anchors (included) in plaster or masonry, if necessary, for a secure hold
- Slip the timer over protruding screw (using keyhole slot in back of timer). See figure 2
- Drive a No. 8 screw through one of the two pre-formed holes located in lower back cabinet. See figure 2

3. Connect Valve Wires to Timer

- Strip 12 mm of the plastic insulation off the end of each wire for both the timer wires and the valve wires
- Connect one wire from each valve (it doesn’t matter which wire) to a single “Common” sprinkler wire (usually white)
- Connect the remaining wire from each valve to a separate colored sprinkler wire

Note: Sprinkler timers are weather-resistant to UL-50 and ETL® Listings, but should not be placed in areas where continuous water could cause damage.

Note: The maximum loading for each station/pump is 250mA, the maximum loading for the timer is 500mA.

If the distance between the sprinkler timer and valves is under 210 m, use Orbit® sprinkler wire or 20 gauge (AWG) plastic jacketed thermostat wire to connect the sprinkler timer to the valves. If the distance is over 210 m, use 16 gauge (AWG) wire.

Important: All wires should be joined together using wire nuts, solder, and/or vinyl tape. In wet environments like a valve box it is recommended to use Orbit Grease Caps to prevent corrosion of the connection and for protection from water infiltration.

Wiring Electric Valves

Strip 12 mm of plastic insulation off the end of each individual wire. Each valve has two wires. One wire (it doesn’t matter which one) is to be connected as the common. The other valve wire is to be connected to the specific station wire that will control that valve. The common wires for all the valves can be connected together to one common wire going to the controller. To avoid electrical hazards, only one valve should be connected to each station. See figure 4

Important: The wire can be buried in the ground; however, for more protection wires can be pulled through PVC pipe and buried underground. Be careful to avoid burying the wires in locations where they could be damaged by digging or trenching in the future.

Your timer is equipped with the simple “push-in” terminals for easy connection. Connect common wire to the common terminal. Connect remaining wires to corresponding terminal locations.
4. Connect Electrical Power

Outdoor Locations – Insert the power cord into a 240V electrical outlet.

Outdoor Locations – If a covered Ground Fault Interrupter (GFI) outlet is available, insert the power cord into the 240 volt outlet. If no outlet is available, the timer must have the wiring permanently installed (see figure 5).

- Turn off the AC power at the AC circuit breaker and apply an appropriate safety lockout. Verify that the power has been turned off to the installation site using an AC voltmeter set for the correct measurement range.
- Use power feed wire of 14 gauge (AWG) minimum with a temperature rating of 155 degrees Fahrenheit (68 degrees Celsius) or higher.
- Install the conduit and associated fittings. Connect the AC electrical power wiring to the source by following all the right codes and local standards.
- Connect the junction box to the Timer using a 13 mm nipple (Junction box and nipple not included). (See Figure 5) Connect the source power conduit to the entrance of the junction box, following all the appropriate codes.
- Take the cord (running from the timer to the junction box) from the junction box and cut it to length. Remove the outer insulation (from cord) to expose the three wires.
- Connect the source wires to the wires extending from the sprinkler timer.
- For USA: Take care to follow the correct color code. Connect the Green for Ground, Black for Live, and White for Neutral. Often the source ground may be bare copper conductor rather than green wire.
- For Europe: Live is Brown and Neutral is Blue, there is no ground connection required. Be sure that all wires are connected to the proper source wire.
- Make sure all connections are made with code-approved insulated connectors.
- Be sure to place a weatherproof gasket and lid on the junction box.
- Turn AC power on at the AC circuit breaker.

Important: Installation Using Permanant Wiring

The sprinkler timer has a built-in transformer that must be connected to an AC voltage source. Check the back of the sprinkler timer box for power requirements. Local building and electrical codes usually require that an approved electrical conduit and electrical fittings be used to connect exterior wall-mounted equipment to AC power. Please check local codes. Any permanent connections should be made by a licensed electrical contractor in accordance with the requirements of the National Electrical Code and other state and local codes.

This sprinkler timer has two holes at the bottom for wire access. Use a 13 mm Nipple to connect the sprinkler timer to a standard electrical junction box. Both connector and junction box must be UL Listed or equivalent or comply with IEC or EN standards or equivalent.

The wire can be buried in the ground, however, for more protection wires should be pulled through electrical conduit and buried underground. Be careful to avoid burying the wires in locations where they could be damaged by digging or trenching in the future.

Caution: Do not connect the sprinkler timer to one phase of a three phase power system used by a pump or other electrical equipment.

Section 3: Programming with Easy-Set Logic™

A note about multiple programs

Your sprinkler timer provides the flexibility of using 3 independent programs (A,B,C). A program is where you store all of your sprinkler settings. It consists of a group of stations set to specific start times and run times. Multiple programs allow you to run different valves on different days with different run times. While many applications only require one program (A), using multiple programs can be useful for drip areas, newly planted lawn, or rotary sprinkler stations. Using programs to group stations with similar water needs will maximize irrigation efficiency.

Primary programming can be accomplished in just a few basic steps.

Primary Programming

Press the [RESET] to clear any previous factory programming.

1. Set Clock
   - Turn dial to [SET CLOCK]

2. Set Date
   - Turn dial to [SET DATE]
   - Y/M/D will appear (blinking letter indicates selection)
   - Press the [+/-] buttons to set the correct year, then press [ENTER] or [
   - Press the [+/-] buttons to set the correct month, then press [ENTER]
   - Press the [+/-] buttons to set the correct date
   - Turn dial to accept date

3. Start time
   - Turn dial to [START TIME]
   - Press the [+/-] buttons to select time you’d like your watering to begin
   - Time will adjust in 15 minute increments
   - The display will show

Note: The battery alone will not operate the valves in your sprinkler system. The sprinkler timer has a built-in transformer that must be connected to an AC voltage source.

5. Activate Battery

One Lithium CR2032 battery (included) is required to retain the program in memory during power loss. Annual replacement is recommended.

Remove the plastic strip to activate the pre-installed battery. (See page 12 for battery replacement)

Tip: To increase or decrease more rapidly, hold down either the [+/-] buttons until the display goes into rapid advance mode.

- Press the [+/–] buttons to set the current time of day
- Press the [+/–] buttons to set am/pm
- Turn dial to accept time

Note: Start-Time Stacking

When a start time is set before the previous program has completed, that start time will be “stacked” or delayed, and will start upon completion of the previous program.
**Run Time**

The run time is the duration for each station is set. STATION is the area that will be watered by each valve. On this screen, the run time or duration for each station is set.

**How Often**

Press the \[ ] to select a station and press the [+/–] buttons to move from one day to another. Press [+] or [ENTER] to select a day for watering. A frame will appear around the selected days.

To delete a previously entered day, press [-] or [CLEAR]. Example: Monday, Wednesday, & Friday.

**Intervals**

- Use the [ ] buttons to move to the INTERVAL option “INT”.
- Press [+/–] buttons to select the number of days between watering.

Example: An interval of 1 will water every day; an interval of 3 will water every 3rd day, etc.

**Odd or Even Days**

- Use the [ ] buttons to move to the ODD or EVEN day watering.
- Press [+] or [ENTER]

Selecting a different option or pressing clear will erase the previous selection.

Example: Odd: 1st, 3rd, 5th, etc.

Example: Even: 2nd, 4th, 6th, etc.

**Manual Watering**

Your timer has the ability to allow you to manually water without disturbing the preset program.

Example:

- Turn the dial to [BUDGETING].
- To adjust press [+/–] buttons, press [ENTER].
- If using multiple programs (A, B, or C) Press the [PROGRAM] button to move to the desired program and make the needed adjustment.

**Water Budgeting**

Water Budgeting is a simple way to adjust your watering duration to match seasonal watering needs. Water Budgeting works by increasing or decreasing watering duration for all stations in each program. Press the [PROGRAM] button to select the program you wish to budget.

Adjustment range is from 10% to 200% by increments of 10%

**Section 4: Additional Features**

**Rain Delay**

[RAIN DELAY] allows you to delay your sprinkler timer from watering for a set period of time. Delay settings are 24, 48, and 72 hours.

- Turn dial to [AUTO]
- Press the [RAIN DELAY] button to automatically delay watering for 24 hours
- If a longer Rain Delay is desired, press the [+/–] buttons to increase or decrease the setting.
- Press [ENTER] or wait 10 seconds and the selected rain delay will begin.
- [CLEAR] button stops the rain delay and scheduled watering will resume.
- At the end of the selected rain delay amount of time, automatic watering resumes.
- While in rain delay mode, the timer display will switch between the actual time and the remaining hours of the delay, every 2 seconds

**Delay Settings**

- [RAIN DELAY] allows you to delay your sprinkler timer from watering for a set period of time. Delay settings are 24, 48, and 72 hours.
- Turn the dial to [AUTO]
- Press the [RAIN DELAY] button to automatically delay watering for 24 hours
- If a longer Rain Delay is desired, press the [+/–] buttons to increase or decrease the setting.
- Press [ENTER] or wait 10 seconds and the selected rain delay will begin.
- [CLEAR] button stops the rain delay and scheduled watering will resume.
- At the end of the selected rain delay amount of time, automatic watering resumes.
- While in rain delay mode, the timer display will switch between the actual time and the remaining hours of the delay, every 2 seconds.

**Water Budgeting**

Water Budgeting is a simple way to adjust your watering duration to match seasonal watering needs. Water Budgeting works by increasing or decreasing watering duration for all stations in each program. Press the [PROGRAM] button to select the program you wish to budget.

Adjustment range is from 10% to 200% by increments of 10%

**Reviewing and Changing Your Program**

If you want to review or change the start times, run times, or how often to water, simply follow the directions again for that option. After reviewing or changing a watering schedule, remember to turn the dial back to [AUTO] for automatic operation.

**Note:** If the run times have not been set, the timer will not initiate manual watering and the screen will return to the current time.

**Example:** Bill just planted new grass seed and wants to water three times per day. He sets START TIME 1 for 5am, START TIME 2 for 12pm, and START TIME 3 for 5 pm. He also sets HOW OFTEN to INT (interval) EVERY 1 DAYS (see section 3, HOW OFTEN).

In AUTO mode the system will water 3 times per day. Once Bill’s sod is established he can CLEAR start times 2 and 3 and return to watering just once per day.
Example: To manually water on station 3 for five minutes, press the [MANUAL] button then press the [ ] buttons until you see station 3; using the [+/–] buttons, set duration to five minutes; press [ENTER].

Note: After the [MANUAL] button has been pushed, if a selection is not made within 5 seconds all stations and programs will begin watering using the programmed RUN TIMES. If no RUN TIMES have been set, nothing will happen and the display will return to the time of day.

Connecting a Rain Sensor
- Connect the rain sensor wires to the wiring terminal ports (yellow in color) labeled “Sensor”
Note: Refer to your rain sensor manual for specific wiring instructions.
- Place the sensor on/off switch to the “on” position to begin operation (see figure 6)

Rain Sensor Bypass
This sprinkler timer is equipped with a sensor override “on/off” switch. This switch is for use during maintenance and repairs, so the sprinkler timer can be operated even if the rain sensor is in active mode.

Important: If the rain sensor switch is in the “on” position and no sensor is connected, the sprinkler timer will not operate. To resume sprinkler timer operation place the switch in the off position

Pump Start & Master Valve
This sprinkler timer allows a master valve or pump start relay to operate whenever a station is on.

Note: If you are activating a pump from this timer, you must purchase a Pump Start Relay. From the pump start relay (or master valve), connect one wire to the “Pump” terminal and the other wire to the “Common” terminal.

Replacing the Battery
Timer requires a CR2032 Lithium battery
- The battery will maintain your program in case of an AC power loss
- Battery should last approximately one year
- Open by sliding the battery tray out to the right
- Insert one CR2032 battery into the compartment with the + side up
- Slide back into place.

A weak or missing battery can cause the time, date, and program to be erased after a power failure. If this happens, you will need to install a fully charged battery and reprogram the timer.

Tip: Replace battery every year, to avoid loss of programming

Note: A battery alone will not operate the valves in your sprinkler system. The sprinkler timer has a built-in transformer that must be connected to an AC line voltage source.

Section 5: Reference

<table>
<thead>
<tr>
<th>TERM</th>
<th>DEFINITION</th>
</tr>
</thead>
<tbody>
<tr>
<td>START TIME</td>
<td>The time the program begins watering the first programmed station.</td>
</tr>
<tr>
<td>VALVE</td>
<td>Supplies water to a specific station or area. The opening and closing of the valve is accomplished through electrical current supplied by the sprinkler timer.</td>
</tr>
<tr>
<td>MASTER VALVE</td>
<td>Typically located at the main water source. Turns on and off water for the entire irrigation system when not in use.</td>

**Troubleshooting**

<table>
<thead>
<tr>
<th>PROBLEM</th>
<th>POSSIBLE CAUSE</th>
</tr>
</thead>
</table>
| One or more valves do not turn on | 1. Faulty solenoid connection  
2. Wire damaged or severed  
3. Flow control stem screwed down, shutting valve off  
4. Programming is incorrect |
| Stations turn on when they are not supposed to | 1. Water pressure is too high  
2. More than one start time is programmed  
3. AM/PM is incorrect |
| One station is stuck on and will not shut off | 1. Faulty valve  
2. Particles of dirt or debris stuck in valve  
3. Valve diaphragm faulty |
| All valves do not turn on | 1. Transformer defective or not connected  
2. Programming is incorrect |
| Timer will not power up | 1. Transformer not plugged into a working outlet |
| Valves continue to turn on and off when they are not programmed | 1. More than one start time is programmed with overlapping schedules  
2. Excessive pressure |

1-800-488-6156 or 1-801-299-5555  
www.orbitonline.com

Before returning this sprinkler timer to the store, contact Orbit® Technical Service at: 1-800-488-6156, 1-801-299-5555 Listings

**LISTINGS**

The sprinkler timer is tested to UL-50 standard & is ETL® listed. Appropriate international models are CSA® and CE® approved. This Class B digital apparatus complies with Canadian ICES-003. Disconnection 1: Type 1Y  
Normal Pollution Situation.

The supply cord of this control can be replaced only by the manufacturer or his accredited service agent.

**TRADEMARK NOTICE**

WaterMaster® is a registered trademark of Orbit® Irrigation Products, Inc. The information in this manual is primarily intended for the user who will establish a watering schedule and enter that schedule into the sprinkler timer. This product is intended to be used as an automatic sprinkler timer for activating 24 VAC irrigation valves, as described in this manual.

**WARRANTY AND STATEMENT**

Orbit® Irrigation Products, Inc. warrants to its customers that its products will be free from defects in materials and workmanship for a period of three years from the date of purchase. We will replace, free of charge, the defective part or parts found to be defective under normal use and service for a period of up to three years after purchase (proof of purchase required). We reserve the right to inspect the defective part prior to replacement.

Orbit® Irrigation Products, Inc. will not be responsible for consequential or incidental cost or damage caused by the product failure. Orbit® liability under this warranty is limited solely to the replacement or repair of defective parts.

To exercise your warranty, return the unit to your dealer with a copy of the sales receipt. This device complies with Part 15 of the FCC Rules. Operation is subject to the following two conditions: (1) This device may not cause harmful interference, and (2) This device must accept any interference received, including interference that may cause undesired operation.

**WARNING:** Changes or modifications to this unit not expressly approved by the party responsible for compliance could void the user’s authority to operate the equipment.

**NOTE:** This device has been tested and found to comply with the limits for a Class B digital device, pursuant to Part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation. This equipment generates, uses and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation.

If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one or more of the following measures:

- Reorient or relocate the receiving antenna.
- Increase the separation between the equipment and receiver.
- Connect the equipment into an outlet on a circuit different from that to which the receiver is connected.
- Consult the dealer or an experienced radio/TV technician for help.

**CAUTION:** This appliance is not intended for use by young children or infirm persons without supervision. Young children should be supervised to ensure that they do not play with the appliance.
